# Market Week: May 19, 2025

## The Markets (as of market close May 16, 2025)

Wall Street enjoyed one of its best weeks in quite some time as stocks moved higher by the close of trading last Friday. Each of the benchmark indexes posted solid weekly gains on the heels of easing U.S.-China trade tensions. The 90-day tariff truce helped drive the S&P 500 back into positive territory for the year. Most of the market sectors experienced growth, with the exception of health care. Consumer discretionary and information technology led the advance, each climbing more than 7.0%. Weaker-than-expected economic reports (see below) chilled investor enthusiasm somewhat, despite the favorable tariff news. Crude oil prices moved higher for the second consecutive week. While easing global tensions helped stocks, gold prices slipped lower. After reaching a three-month high of 4.55% last Thursday, yields on 10-year bonds dipped by the end of the week. Nevertheless, yields closed the week more than 20 basis points higher than their values at the start of May.

## Eye on the Week Ahead

The housing sector is front and center this week. The latest data on sales of new and existing homes is

available for April. Sales of existing homes fell in March, while sales of new single-family homes rose. Higher mortgage lending rates have kept some potential homebuyers away over the past several months.
